

MASSIVEBIO

A Guide To Breast Cancer Clinical Trials

Massive Bio, Inc.

Understanding Breast Cancer

Breast cancer is a disease where malignant cells form in the tissue of the breast. It is the second most common cancer type for women with 12.8% of women being diagnosed throughout their life. Even though most people think of women when it comes to breast cancer, roughly 1% of patients are male.

There were over 268,000 new cases last year alone. By far, the most common screening method for breast cancer is a mammogram. For those who have a family history or at a high risk of breast cancer, MRIs are also used.

The most common breast cancer types are:

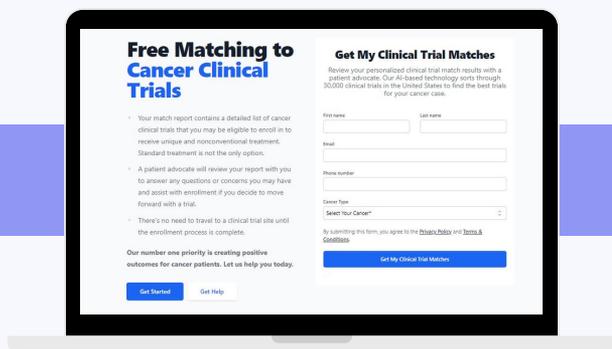

- Ductal carcinoma in situ (DCIS)
- Invasive ductal carcinoma
- Metastatic breast cancer
- Inflammatory breast cancer (IBC)
- Triple-negative
- Invasive lobular cancer (ILC)
- HER2-positive

How Clinical Trials Can Help

There are close to 1,000 breast cancer clinical trials recruiting in the United States. These trials are investigating new treatments and detection methods that could save lives in the future such as:

- Biomarker-based targeted therapies
- Immunotherapy used in combination with chemotherapy

Participating in a clinical trial not only progresses much-needed research but gives patients access to these new innovative therapies years before the general population.

How We Can Help

At Massive Bio, our mission is to enable cancer patients to have equal access to cutting-edge therapies and clinical trials, regardless of their location and/or financial stability.

Our Artificial Intelligence (AI) powered Clinical Trial Matching System connects patients and their treating oncologists to clinical trials according to their unique cancer case.

We enlist dedicated staff to collect medical records and treatment history and match patients to eligible trials near their home. We provide full support throughout your enrollment process to ensure logistics are handled so you can concentrate on your health.

Massive Bio Launches Industry's First NASA-Style, Oncology Clinical Trial Command Center

The National Cancer Institute Awarded Contract to Develop an Oncology Based Artificial Intelligence-Enabled Clinical Trial Recruitment Tool
