

A Guide To Non-Small Cell Lung Cancer Clinical Trials

Massive Bio, Inc.

Understanding Non-Small Cell Lung Cancer

Non-small cell lung cancer (NSCLC) is the most common type of lung cancer, about 80% of lung cancer cases are NSCLC. NSCLC typically grows slower than Small-cell lung cancer (SCLC). There are three types of NSCLC:

- Adenocarcinoma: The most common type of NSCLC, which starts in cells that make mucus and is found on the outer parts of the lung
- Squamous cell carcinoma: Accounts for about 25% of NSCLC cases, which starts in the lining of the airways of the lungs
- Large-cell carcinoma: The least common type of NSCLC, occurring in about 10% of cases and starting anywhere in the lung

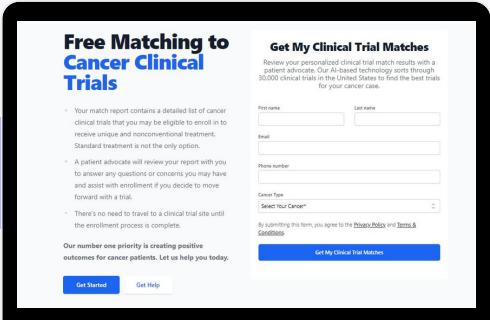

How Clinical Trials Can Help

There are approximately 835 clinical trials for non-small cell lung cancer recruiting patients in the United States. These trials are investigating new treatments and detection methods that could save lives in the future such as:

- Targeted therapies for new biomarkers
- Immunotherapy using new monoclonal antibodies
- Combinations of chemotherapies with other drugs
- Cryosurgery
- Photodynamic therapy (PDT)

Participating in a clinical trial not only progresses much-needed research but gives patients access to these new innovative therapies years before the general population.

The screenshot shows a web page titled "Free Matching to Cancer Clinical Trials". It features a section for "Get My Clinical Trial Matches" where users can enter their name, email, phone number, and cancer type to receive personalized results. A note at the bottom states that by submitting the form, users agree to the Privacy Policy and Terms & Conditions. There are "Get Started" and "Get Help" buttons at the bottom left.

How We Can Help

At Massive Bio, our mission is to enable cancer patients to have equal access to cutting-edge therapies and clinical trials, regardless of their location and/or financial stability.

Our Artificial Intelligence (AI) powered Clinical Trial Matching System connects patients and their treating oncologists to clinical trials according to their unique cancer case.

We enlist dedicated staff to collect medical records and treatment history and match patients to eligible trials near their home. We provide full support throughout your enrollment process to ensure logistics are handled so you can concentrate on your health.

Massive Bio Launches Industry's First NASA-Style, Oncology Clinical Trial Command Center

The National Cancer Institute Awarded Contract to Develop an Oncology Based Artificial Intelligence-Enabled Clinical Trial Recruitment Tool
